Database

This is my database that holds information about athletes and their race times. This is very helpful for track athletes so they can document all of their race times in a single database so that they can see how their progression looks over time. In the "Athlete" table, the "AthleteID" is the primary key. In the "Race" table, the "RaceID" is the primary key and the "AthleteID -> AthID" is the foreign key. The athlete has the ability to give themselves a biography and add comments on how they performed during their race.
